

DRESSAPP FOR KIDS

The Fun and Easy Way to Play Dress-Up!

My DressApp Closet Book

A Super Simple Guide to Managing Your Clothes & Outfits

For Kids Aged 8 and Up

Friendly Edition

Date: July 2026

1. What is DressApp?

Welcome to DressApp! This is a fun app that lets you build your very own digital clothes closet. Imagine taking pictures of all your shirts, pants, skirts, and shoes, and putting them into a magical book. Once they are inside, a friendly helper looks at your clothes, checks the weather outside, and helps you pick what to wear today! You can also dress up your own character (avatar), trade or share clothes with friends, and see how much your closet is worth.

2. What You Need

- A computer, tablet, or phone with a web browser.
- A camera on your device to snap photos of your clothes.
- A microphone on your device so you can talk to your styling friend.
- An account created with the help of a parent or guardian.

3. Step-by-Step Instructions

3.1 Adding Clothes to Your Magical Closet

Let's put your physical clothes into your digital game closet!

1. Open the app and click the 'Add Item' button.
2. Click 'Take Photo' to take a picture of your garment, or click 'Upload Photos' if you already have a picture saved.
3. The app checks if you already added this item before. If you did, a pop-up window will ask if you want to skip it.
4. If it's a new item, wait 5 seconds. The app will magically remove the background, crop the clothing item, and guess its color and fabric.
5. Check if the app guessed right! You can choose the type of clothing (like shirt or pants). If the cutout shape looks wrong, changing the clothing type category will fix it.
6. Click the 'Save' button. Now the item is saved in your closet grid!

3.2 Talking to Your AI Fashion Friend

You have a friendly AI helper who gives you advice on what to wear. You can talk to it just like a friend!

1. Go to the 'AI Stylist' screen.
2. Tap the 'Microphone' button.
3. Ask a question out loud, like: 'What matches my blue jeans for a rainy school day?'
4. You will see your words appear on the screen as you talk.
5. If the voice typing doesn't work, the app will record your voice and send it to the smart helper.
6. The helper will read the weather, check what clothes are in your closet, and suggest an outfit.
7. The helper will speak back to you! Click 'Play Reply' to hear the advice again.

3.3 Managing Your Profile (Why it matters!)

Your Profile page has different accordion sections. Let's see what each section does and why it is important:

1. Photos & Avatar

- Why does it matter?: This is where you put your profile photo. It lets the app draw your character avatar.

2. Style Profile (Your Preferences)

- Why does it matter?: It tells the helper what kind of clothes you like to wear. If you prefer modest clothes, you can toggle that option. The helper will only suggest outfits that make you feel comfortable.

3. Details (Name & Phone)

- Why does it matter?: This lets the app know who you are so it can greet you by name. The app uses your name in greeting alerts and emails.

4. Body & Measurements (Your Sizes)

- Why does it matter?: It helps the app find clothes that fit you when you are looking at online shops. The shopping assistant reads size tables on websites and tells you which size fits best.

5. Lifestyle

- Why does it matter?: It helps the helper understand what you do every day (like school or play) and customizes trend suggestions.

6. AI Configuration (The Smart Brain)

- Why does it matter?: It configures how the smart helper thinks. You can run it offline on your phone or use custom keys to route queries.

7. Scheduler & Push (Morning Alerts)

- Why does it matter?: It wakes up the app to give you outfit ideas every morning!

8. Google Calendar

- Why does it matter?: It matches your outfits to your daily activities, checking if you have soccer practice, music class, or school.

9. Location Services (Where You Are)

- Why does it matter?: It makes sure the helper knows the weather where you live, so it won't suggest a thick coat on a hot summer day.

10. Voice & Language

- Why does it matter?: It lets you pick how the helper speaks to you and changes the language.

11. Invite Friends

- Why does it matter?: It lets you share the app with friends. For every friend who signs up, you get +10 extra spots in your closet.

3.4 Checking Your Wardrobe Stats

- Closet Worth: How much money all your clothes cost together.
- Closet Utilization: The percentage of clothes you have worn at least once.
- Cost-per-Wear: How cheap or expensive a garment is based on how many times you wore it.

3.5 Dress-Up Canvas

- Layering (Dual Canvas): If you are wearing a jacket over a shirt, the screen will show you two avatars side-by-side: one with the jacket on, and one with the jacket off so you can see the shirt underneath!
- Interactive Click: Tap directly on any clothing item on your avatar's body. The app will immediately show you the details of that shirt or pants.

3.6 Travel Suitcase Assistant

- Intelligent Curation: Generates daily outfits and packing lists based on trip setup dates, duration, local weather, and calendar events.
- Refinement Chat: Chat with the AI stylist to tweak the suitcase while preserving the rest of the curated list.

3.7 The Swap & Sell Shop (Marketplace)

- Create a Listing: Open an item's detail page, select Edit Intent, and choose For Sale (input price/currency), Rent (input daily rate), Swap (mark open for trade), or Donate (publish free).
- Try-On Sandbox: Buyers can test-fit your listing against their own clothes on their avatar before deciding to swap or buy.

4. Expected Results

- Garment Cutouts: Your clothes will appear in your digital closet as clean cutouts without backgrounds.
- Inpainted Garments: If your clothes were cut off in the photo, the AI will fill in the missing pieces (using Nano Banana reconstruction).
- DPP Verified Badge: Scanned retail QR tags will show a green badge verifying materials.
- Avatar Layering: Your avatar will display your layered clothes without any visual glitches.

5. Troubleshooting (Easy Solutions!)

Help! My closet is full and I can't add more clothes!

Why it happens: Free accounts are limited to 150 items. Easy fix:

1. Subscribe to the Pro plan, or share your invite link with a friend to get +10 extra spots.
2. Get a free Gemini API key by logging into Google AI Studio with your Google account
Create API key: Go to the 'Get API key' section on the left sidebar, click Create API key, and copy your unique string. No credit card is required for the free tier.

My camera won't turn on!

Why it happens: Your web browser doesn't have permission to use the camera. Easy fix: Go to browser settings, allow camera access, and refresh the page.

The app is running slow when I upload multiple pictures!

Why it happens: Processing pictures takes a lot of computer work. Easy fix: The app automatically processes them one by one. Just wait a minute!

6. Limitations

- Voice typing works best on Google Chrome or Apple Safari browsers.
- Dark, blurry, or folded clothes might not be recognized correctly by the scanner. Try taking pictures in a bright room with the garment laid flat.
