

DRESSAPP FOR KIDS

The Fun and Easy Way to Play Dress-Up!

My DressApp Closet Book

A Super Simple Guide to Managing Your Clothes & Outfits

For Kids Aged 8 and Up

Friendly Edition

Date: July 2026

1. What is DressApp?

Welcome to DressApp! This is a cutting-edge app that lets you build your very own digital clothes closet. Imagine taking pictures of all your shirts, pants, skirts, and shoes, and putting them into a magical book. Once they are inside, a professional and experienced stylist looks at your clothes, checks the weather outside, and helps you pick what to wear for any occasion! You can also dress up your own character (avatar), trade or share clothes with friends, and see how much your closet is worth.

2. What You Need

- A computer, tablet, or phone with a web browser.
- A camera on your device to snap photos of your clothes.
- A microphone on your device so you can talk to your professional AI Stylist.
- A Gemini API Key. Get it for free on Google AI Studio (<https://aistudio.google.com/>).

3. Step-by-Step Instructions

3.1 Adding Clothes to Your Closet

Let's put your physical clothes into your digital closet!

1. Open DressApp and click the 'Add Item' button.
2. Click 'Take Photo' to take a picture of your garment, click 'Upload Photos' if you already have a picture saved, click 'Import URL' to grab a garment from an online shop link, or click 'Upload Receipt' to parse a PDF or image receipt from your purchases.
3. The app checks if you already added this item before. If you did, a pop-up window will ask if you want to skip it.
4. If it's a new item, wait 5 seconds. The app will magically remove the background, crop the clothing item, and extract its attributes.
5. Check the results! You can choose the type of clothing (like shirt or pants). If the cutout shape looks wrong, changing the clothing type category will fix it.
6. Click the 'Save' button. Now the item is saved in your closet grid!

3.2 Talking to Your professional AI Stylist

You have a professional AI stylist who gives you advice on what to wear. You can talk to it just like a friend!

1. Go to the 'AI Stylist' screen.
2. Tap the 'Microphone' button.
3. Ask a question out loud, like: 'What matches my blue jeans for a rainy school day?'
4. You will see your words appear on the screen as you talk.
5. If the voice typing doesn't work, the app will record your voice and send it to the Stylist.
6. The Stylist will read the weather, check what clothes are in your closet, and suggest an outfit.
7. The Stylist will speak back to you! Click 'Play Reply' to hear the advice again.

3.3 Managing Your Profile (Why it matters!)

Your Profile page has different settings sections. Here is why each section is important:

1. Photos & Avatar

- Why does it matter?: This is where you put your profile photo. It lets DressApp draw your character avatar. You will see the outfits on your character avatar.

2. Style Profile (Your Preferences)

- Why does it matter?: It tells the Stylist what kind of clothes you like to wear. If you prefer modest clothes, you can toggle that option. The Stylist will only suggest outfits that make you feel comfortable.

3. Details (Name & Phone)

- Why does it matter?: This lets DressApp know who you are so it can greet you by name. The app uses your name in greeting alerts and emails. Your phone number is used to send push alerts.

4. Body & Measurements (Your Sizes)

- Why does it matter?: It helps DressApp find clothes that fit you when you are looking at online shops. The Shopping assistant reads size tables on websites and tells you which size fits best.

5. Lifestyle

- Why does it matter?: It helps the Stylist understand what you do every day (like a student, office worker, lawyer, or party) and customizes trend suggestions that suit you best.

6. AI Configuration (The Smart Brain)

- Why does it matter?: It's crucial to have a Gemini (or other model of your choice) API key. Without it, DressApp cannot perform its magic. You have to select a multi-modal AI model.

7. Scheduler & Push (Morning Alerts)

- Why does it matter?: It will give you the perfect outfit for the next day based on your calendar, the weather, and your style. The Stylist will rotate your closet for a perfect outfit every day! Saving the frustration of standing in front of the closet and trying to figure out what to wear. It will help you use all of the items in your closet.

8. Google Calendar

- Why does it matter?: It matches your outfits to your daily activities, checking if you have soccer practice, a date, or an important meeting.

9. Location Services (Where You Are)

- Why does it matter?: It makes sure the Stylist knows the weather where you live, so it won't suggest a thick coat on a hot summer day.

10. Voice & Language

- Why does it matter?: It lets you pick how the Stylist speaks to you and changes the language.

11. Invite Friends

- Why does it matter?: It lets you share the app with friends. For every friend who signs up, you get +10 extra slots in your closet.

3.4 Checking Your Wardrobe Stats

- Closet Worth: How much money all your clothes cost together.
- Closet Utilization: The percentage of clothes you have worn at least once.
- Cost-per-Wear: How cheap or expensive a garment is based on how many times you wore it.
- Color Palette Breakdown: Stats showing your wardrobe's colors, materials, and categories breakdown.

3.5 Outfit Planner

- Outfit Canvas: Layer and combine clothes dynamically on your custom character avatar to build your outfit layout.
- Dual Canvas (Layering): If you are wearing a jacket or outerwear over a shirt, the interface renders a side-by-side view (one avatar showing the outerwear, one without) so you can review both layers simultaneously.
- Interactive Body-Mapping: Click directly on any clothing item on your avatar's body to open its dedicated details pane.
- Grading & Metrics: Displays progress bars grading how well your outfit matches current weather alerts, formality rules, and color palette guidelines.

3.6 Travel Suitcase Assistant

- Intelligent Curation: Generates daily outfits and packing lists based on trip setup dates, duration, local weather, and calendar events.
- Refinement Chat: Chat with the AI stylist to tweak the suitcase while preserving the rest of the curated list.

3.7 The Swap & Sell Shop (Marketplace)

- Create a Listing: Open an item's detail page, select Edit Intent, and choose For Sale (input price/currency), Rent (input daily rate), Swap (mark open for trade), or Donate (publish free).
- Try-On Sandbox: Buyers can test-fit your listing against their own clothes on their avatar before deciding to swap or buy.
- Marketplace Scope: Share, donate, rent, or trade clothes with other users in your area!

3.8 Your Closet

- View & Filter: Browse all your registered shirts, pants, skirts, shoes, and outerwear in a grid. Filter by color, category, season, or material.
- Multi-Select & Delete: Enable select mode to checkmark multiple clothing items and bulk delete them from your wardrobe database in a single action.
- Item Grouping: Combine individual garments into a synchronized Set (like a suit or matching dress sets) or ungroup sets back into single items.
- Edit Pane (itemDetails): Fine-tune parsed parameters. Manually edit season compatibility, formality tags, primary/secondary colors, fabrics, and custom annotations inside the item's detail editor.

3.9 Trend Scout

- Daily Fashion Feed: Receives style suggestions, fashion trends, and articles tailored specifically to match your profile preferences.
- Trend Buckets: Explore SS26 Runway (latest high-fashion), News Flash (breaking style reports), Recycling (sustainable fashion), and Influencers (social trendsetters).

3.10 Ask a Professional

- Fashion Expert Directory: Browse a registry of certified professional stylists, fashion advisors, and wardrobe consultants.
- Style Speciality Search: Filter experts by region, country, or specific fashion specialties.
- Direct Contacts: Reach out directly via phone, send direct emails, or visit their professional portfolios and websites.

4. Expected Results

- Garment Cutouts: Your clothes will appear in your digital closet as clean cutouts without backgrounds.
- Inpainted Garments: If your clothes were cut off in the photo, the AI will fill in the missing pieces (using Nano Banana reconstruction).
- DPP Verified Badge: Scanned retail QR tags will show a green badge verifying materials.
- Avatar Layering: Your avatar will display your layered clothes without any visual glitches.

5. Troubleshooting (Easy Solutions!)

Help! My closet is full and I can't add more clothes!

Why it happens: Free accounts are limited to 150 items. Easy fix:

1. Subscribe to the Pro plan, or share your invite link with a friend to get +10 extra spots.
2. Get a free Gemini API key by logging into Google AI Studio with your Google account Create API key: Go to the 'Get API key' section on the left sidebar, click Create API key, and copy your unique string. No credit card is required for the free tier.

My camera won't turn on!

Why it happens: Your web browser doesn't have permission to use the camera. Easy fix: Go to browser settings, allow camera access, and refresh the page.

The app is running slow when I upload multiple pictures!

Why it happens: Processing pictures takes a lot of computer work. Easy fix: The app automatically processes them one by one. Just wait a minute!

6. Limitations

- Voice typing works best on Google Chrome or Apple Safari browsers.
- Dark, blurry, or folded clothes might not be recognized correctly by the scanner. Try taking pictures in a bright room with the garment laid flat.
